RATIONALE

This concept is warm, earthy and natural. Curved line is one of the most important element to create a natural atmosphere in a space. Also he loves music and plays piano very well. Since he is a graphic designer, he wants some unique feature wall but still keeping the earthy feeling. This feature wall shape is from the top over of grand piano. Greenery wall with wood panels will create warm feeling, which is following the piano curved lines. Stair case with railing also includes curved lines. It continues till master bedroom railing and meet the edge of feature wall. So it looks like huge one piece in the whole loft living room. It is solid railing for privacy because he is often having a party with many guests.
